

# Sprint Retrospective

## List of actions to take:

- add comments in order to make the documentation complete
- add the badge in readme
- work on different branches, make pull requests
- make sure that the commit messages are clear

## Observations/issues ranked by severity:

1. Some classes have missing comments - need update for better documentation
2. Lack of a badge in README - one has to go to github actions to check if build passed
3. There were some messy commits that should not have been pushed to main
4. Some commit messages were not up to standards
5. There were some minor issues because of work on different operating systems

## Other remarks:

We have successfully completed all of the product backlog items we intended. The project is not missing any of the requirements for passing.
